

V10.2.1

December 11, 2024

The DataRobot Self-Managed AI Platform v10.2.1 release, part of DataRobot's continual effort to secure the product and platform, addresses issues reported in earlier releases. See also the [features introduced in v10.2.0](#), released *November 21, 2024*.

Issues fixed in V10.2.1

The following issues have been fixed since release v10.2.0:

Trust and Explainability

- TREX-5608: Fixes an issue where SHAP Individual Prediction Explanations and SHAP distribution jobs failed with an internal error because of improper handling of date-time columns with null values.

Generative AI

- BUZZOK-24029: Fixes an issue causing request errors in the deployment's chat completion API when `metadata_filter` for vector database retrieval is specified in the request.

On-premise users: [click in-app](#) to access the full platform documentation for your version of DataRobot.

Model management

- MMM-18063 – Fixes an issue that resulted in incorrect centroid extraction from multipoint WKT geometry types.
